

Cloud Lifecycle Management

Power digital innovation with a cloud platform that delivers agility while managing risk and cost

PRODUCT DESCRIPTION

BMC Cloud Lifecycle Management is a cloud management platform that automates the rapid provisioning of multi-tier IT services across cloud and non-cloud platforms. Cloud Lifecycle Management integrates to IT processes like change management, the CMDB, compliance, and patching to optimize agility while maintaining essential governance and compliance for mission-critical cloud workloads.

BUSINESS CHALLENGE

To enable digital innovation, IT organizations must deliver IT services when and how they're needed. Frustrated business users seeking faster, customized services are going around IT to source infrastructure themselves from the public cloud. This brings additional risk to IT's already difficult task of managing security and compliance across increasingly more heterogeneous cloud and legacy datacenter infrastructures. To maintain relevancy in the digital age, IT organizations must re-establish themselves as the first choice for service delivery by supporting fast delivery of IT services across multiple platforms while protecting the business from increasing risk.

BMC SOLUTION

BMC Cloud Lifecycle Management helps IT support digital innovation and become a trusted services broker to the business. It orchestrates the agile delivery and ongoing management of IT services across private and public cloud as well as legacy datacenter infrastructures, integrating to essential IT management processes to manage risk and reduce cost.

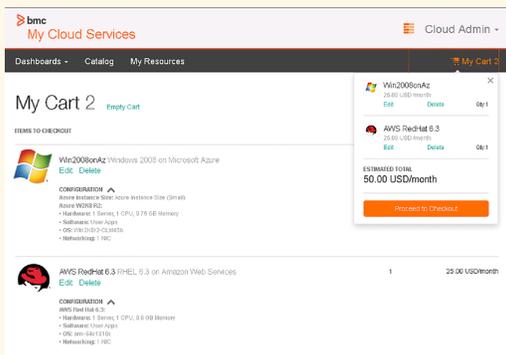

KEY FEATURES

Transform IT into a trusted services broker.

- Support digital innovation by reducing IT service provisioning time with end-to-end cloud automation
- Drive down costs with one management platform across private and public cloud and legacy infrastructure
- Reduce risk by applying consistent compliance and governance policies across your heterogeneous IT environment

KEY BENEFITS

- Up to 90% faster provisioning of IT services
- Up to 20% cost savings from labor reduction with automated provisioning
- 10x reduction in security risk with automated cloud governance and compliance

Easily and securely provision to Amazon Web Services™ and Microsoft® Azure® public clouds.

PRODUCT DETAILS

Self-service portal: Business users can request configurable services across infrastructure, platforms, and applications without intervention from IT. With integration to BMC MyIT, a single service catalog can be provided for all IT service requests.

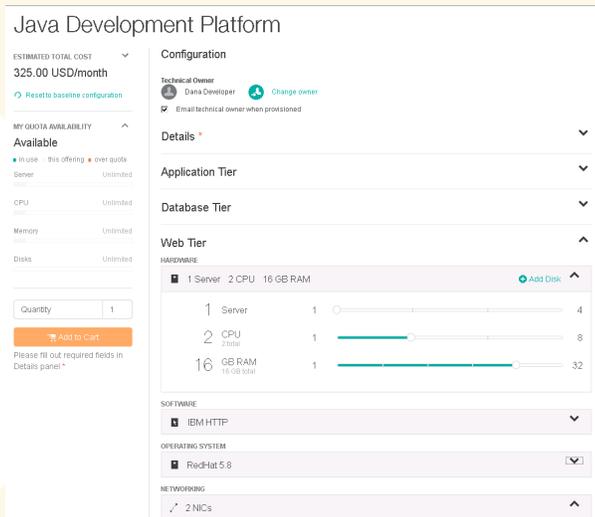

Full-stack service provisioning: Sophisticated blueprint technology automates the provisioning, ongoing management, and de-provisioning of a full business service and supports application container technologies to support agile development and deployment.

Automated ITSM governance: Built-in integration to change management processes and updates to the configuration management database (CMDB) ensure ITSM governance across the full lifecycle of the cloud service.

Continuous compliance: Policies for regulatory and security compliance requirements can be automatically applied to the service at time of provisioning, and the solution performs ongoing automation of patching, configuration management, and remediation.

Platform neutrality: Deliver services across any platform according to targeted workload requirements. The solution supports a wide range of infrastructures and public clouds to help you maintain flexibility and avoid vendor lock-in.

Service health management: Easily monitor service health through an intuitive dashboard, auto-scale resources up or down according to pre-defined service requirements, and minimize disruption in services with proactive, actionable failure notifications and recommended remediation steps.

Users can request configurable full-stack services from the My Cloud Services portal with a consumer-like, intuitive interface.

We provide innovative, customized business process consulting, software implementation services and Level 1 bilingual support for multiple ITSM and DEM solutions and add-ons. We understand that in today's day and age, technology leaders are focused on transforming how IT operates. Digital transformation and automation are key elements in ensuring that most organizations keep up with how fast-paced both technology and information are consumed and delivered – at work and at home; on premise and in the cloud.
